

OUR TECHNICAL TEAM IS THE BEST OF THE BEST.

RedBuilt™ is a leading engineered wood products, structural components and construction systems supplier to the commercial construction industry across North America. Our reputation for unparalleled service and support goes back over 50 years.

And we're growing.

We are currently seeking a summer intern to support our engineered wood products commercial business. The intern will work under the direction of Professional Engineers and will be primarily responsible for structural analysis and product design using proprietary engineering software, producing and reviewing shop drawings and creating material lists. The job function also includes working directly with contractors, architects and engineers. Cross training opportunities exist in our industrial and corporate engineering functions.

There are openings for this position in Boise, ID, Chino, CA, Delaware, OH and Hillsboro, OR. The engineering intern will report to the local Design Center Leader.

Qualifications

- Currently enrolled in an accredited Engineering or Engineering Technology program.
- Framing experience is a plus.
- Ability to read blue prints and other construction documents.
- Must be computer literate including EXCEL and WORD. Experience with AutoCAD or the ability to quickly learn a plus.
- Must be capable of performing successfully in a team and individual environment in order to meet customer timelines.
- Ability to establish and maintain excellent working relationships with customers, sales associates and the technical team.

If this sounds like you, we'd love to hear from you!

Email your resume and preferred location to kyakar@redbuilt.com. No phone calls, please.
