

RedBuilt™ Engineered Wood Products in StruCalc™

StruCalc, Inc. has announced the inclusion of RedBuilt™ engineered wood products in the latest version of its StruCalc™ design software. StruCalc™ users may now design Red-I™ or RedLam™ LVL joists, rafters, and beams.

StruCalc™ is a multi-purpose design package, offering column, collar tie, and footing modules in addition to the joist/rafter and beam modules, presented in a graphically pleasing, user-friendly interface. StruCalc, Inc. has this to say about the software and its latest version:

StruCalc™ is an easy-to-use structural analysis software tool optimized for residential and light commercial projects that aids in the analysis and design of beams, columns, footings, and collar ties using wood, steel and manufactured lumber. This design strategy created a prime market for RedBuilt engineered wood products. We are now proud to announce the inclusion of RedBuilt™ LVL and I-joists in the newest version of StruCalc™.

StruCalc™ aims to bring a quality, professional software, built with strict engineering methods and specifications to every business in need of an easy to use, affordable software package. Keeping your software bottom line low is at the forefront of our company.

StruCalc™ is now used by people around the world; our users include architects, building officials, engineers, home designers, and private homeowners building or remodeling their homes. Since the early 90's, StruCalc™ has been improved and upgraded based on our design experience and the needs of our customers. Today it includes eleven separate design modules, four diagrams, easy to read one-page printouts, and an upgrade system that allows older project files to be easily ported into new versions of our software.

StruCalc™ makes it easy to choose a relevant module for each design issue. Uniformly loaded beams, square, round, rectangular and continuous footings, roof beams, combination roof and floor beams, multi-loaded multi-span beams, multi-span floor beams, multi-span roof beams, floor joists, roof rafters, columns and collar ties are all available in StruCalc™.

StruCalc™ also provides a wealth of design and tutorial information on its webpage and in the program via pdf design walkthroughs, as well as video tutorials.
