

OUR TECHNICAL TEAM IS THE BEST OF THE BEST.

RedBuilt is a leading engineered wood products, structural components and construction systems supplier to the commercial construction industry across North America. Our continued reputation for unparalleled customer service and support goes back over 50 years.

And we're growing. We currently have technical positions open for talented individuals who want to be part of this dynamic team.

BIM Technician

RedBuilt employs a group of Design Technicians. The Design Technician is a hands-on structural design expert, working under the supervision of a licensed Professional Engineer, to design and supply our structural frame products into wood framed structures. Our Design Technicians are familiar with the construction industry, and enjoy designing structural systems. They excel in math, communication, interpreting construction documents, and supporting our customers throughout the installation of our products and for the life of the structure. We are currently developing a service posture to support the growth of BIM in the industry and we're looking for a skilled BIM Technician to add to our team. This new BIM Technician role will wear two hats: one of the traditional Design Tech, and the other will be working with our CAD Manager on tool, process, training, and standards development.

Major duties include:

- Create 3D models and CAD drawings with tools like Revit and AutoCAD
- Structural Product Analysis using RedBuilt™ engineering software
- Creating product layout drawings, details, & material lists.
- Providing design assistance to Engineers, Architects, builders & inspectors.
- Critical communication with external as well as internal members of the project team.

Our Design Technicians are familiar with the construction industry, and enjoy designing structural systems. They excel in math, communication, and reading and interpreting blueprints and other construction documents.

Qualified candidates must have 5+ years of experience applying BIM software such as Revit in the AEC industry, as well as experience using AutoCAD and Microsoft Office. Experience in structural design of wood framed floor & roof systems is preferred, and framing or construction experience is a plus. We are looking for people with strong organizational, analytical, and communication skills who thrive in a team environment and can maintain excellent working relationships with customers, sales and others on the technical team. Many of our Design Technicians have a two-year degree or certificate in Drafting, Engineering, Construction Management or Architecture.

BIM Technician is an hourly position with excellent benefits (medical, dental and vision, life, short-term disability, 401k plan and profit-sharing), working under the supervision of a licensed Professional Engineer, and reports to a Design Center Leader.

Positions are available in Boise, ID and Chino, CA.

If this sounds like you, we'd love to hear from you!
