## **Structural Frame Designer – Architectural/Structural – Delaware, OH**

**RedBuilt™ is a leading supplier to the commercial construction industry** across North America, with a portfolio of engineered wood products and solutions second to none. Our reputation for unparalleled service and support goes back over 60 years.

And we're growing.

We currently have technical positions open for talented individuals who want to be part of this dynamic team. Our designers play a key role in the design of every product solution for our customers. They are experts in not only structural design and RedBuilt™ products, but in clear communication of product application and installation requirements. Projects may be diverse, but we specialize in the Restaurant and Retail segment of the commercial construction industry. The primary duties are:

- Provide structural framing and component layouts and calculations
- Utilize wall and roof design and drafting software
- Develop details and material lists for production of components
- Communicate with general contractors, architects, engineers, and our team of field reps

Our Designers are familiar with national brand construction style and enjoy designing both prototypical and site-adapt structural framing systems. They excel in math, communication, and reading and interpreting blueprints, and other construction documents. Previous framing experience is a plus. Qualified candidates will be savvy in Microsoft Office, communicate through Teams, and able to quickly get up to speed in Revit. Previous experience using design software is a plus. We are looking for people who thrive in a fast-paced, team environment and can maintain excellent working relationships with customers, sales, and others on the technical team.

Many of our Design Technicians have two or four year degrees or certificates in Engineering, Construction Management, or Architecture. It's an hourly position with excellent benefits (medical, dental and vision, life, short-term disability, profit sharing, and 401k plan + match). You will be working under the supervision of a licensed Professional Engineer and reports to a Design Center Leader. We have a position available in our Delaware, OH location.

**If this sounds like you want to begin your career with an industry leader, we'd love to hear from you!**
